/note-*Organ: mixed (see below); Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (melanocyte 2NbHM, pregnant uterus NbHPU, and fetal heart NbHHJ9W) were mixed, and se circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 360232-265223, 340488-345479, and 484488-489479.*
                                                                                                                                                                                                                                                                                                 /tissue_type="Pooled human melanocyte, fetal heart, and

osteoclasts prepared from the long bones of 10 day old
rabbits. First strand cDNA was synthesized by priming
with an oligo(dT)-Not1 anchor-primer and second strand
with an oligo(dT)-Not1 anchor-primer and second strand
cDNA was synthesized by replacement synthesis as described
by Gubler and Hoffman (Gene 25:283, 1983). Following the
addition of Sal1 adapters and Not1 digestion, the cDNA was
cloned between the Sal1 (50) and Not1 (30) sites of the
pSPORT1 (BRL) plasmid vector."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cDNA was synthesized by replacement synthesis as described by Gubler and Hoffman (Gene 25:283, 1983). Following the addition of SalI adapters and NotI digestion, the cDNA was cloned between the SalI (50) and NotI (30) sites of the psporTI (BRL) plasmid vector."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="Vector: psport1; Site_1: Sall; Site_2: Not1; poly(A)+ RNA was purified from a 97% pure population of osteoclasts prepared from the long bones of 10 day old rabbits. First strand cDNA was synthesized by priming with an oligo(dr)-Not1 anchor-primer and second strand with an oligo(dr)-Not2 anchor-primer and second strand with anchor-primer and second strand with a second strand with a seco

pT sequences encoding receptors having at least one domain replaced
pT by corresp. yeast domain used to transform yeast host cells
pS Disclosure; Page 27; 65pp; English.
CC concode a 5' end by an EcoRI adhesive end followed by the extracelular
CC verminal domain of the STE2 gene prod. contg. nucleotides 1-147 of the
CC yeast G protein-coupled protein gene joined to nucleotides 103-136 of
CC the human G protein-coupled protein gene joined to nucleotides 103-136 of
CC the human G protein-coupled protein gene joined to nucleotides 103-136 of
CC transparent were joined in a four-part ligation, to construct pHRS16.
CC fragment were joined in a four-part ligation, to construct pHRS16.
CC fragment were joined in a four-part ligation, to construct pHRS16.
CC adrenergic-STE2 hybrid receptor.

Oligonucleorides 2C2719 and ZC2720 (Q13383-84) were designed to encode a 5' end by an EcoRI adhesive end followed by the extracellular encode a 5' end by an EcoRI adhesive end followed by the extracellular encode a 5' end by an EcoRI adhesive end followed by the extracellular encode a 5' end by an EcoRI adhesive end followed by the extracellular encode a 5' end by an EcoRI adhesive end followed by the extracellular encoding nucleotides 1-147 of the yeast G protein-coupled protein gene of conclectides 103-136 of the human G protein-coupled protein gene (see Q1381).
The oligonucleotides, the beta2AR fragment and the pMVR1 vector fragment were joined in a four-part ligation, to construct pHRS16. From pHRS16, construct pHRS17 is produced encoding the human beta2-adrenergic-STE2 hybrid receptor.

This sequence encodes the protein of the invention. The protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 125I-cyanopindrol. The protein can be used approximately 75 pM against 125I-cyanopindrol. The protein can be used screening for agonists and antagonists, which are useful in researching asthmatic diseases.

PT specific treatments for obesity in dogs

PT claim 1; Page 45-46; 79pp; French.

CC receptor (RA-Ca-b2) gene. The sequence was isolated from a cDNA library constructed from polyA+ RNA purified from dog brown adipose tissue cells.

CC The probe was a 600 bp fragment of the coding region of the human beta-3 cadrenergic receptor covering the region from the initiation codon to transmembrane domain 5 (TMS). The full length insert was cloned into M13 crossed e.g. in a mammalian cell, by subcloning into an expression vector such as pCDNA3. The beta-2 receptor can be used in comparative structure-function studies, e.g. for differential screening of ligands specific for RA-Ca-b2 or RA-Ca-b3 (W44933).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel beta-2 adrenalin receptor sub-type - useful for screening for agonists and antagonists and researching asthmatic diseases Disclosure; Page 27-30; 47pp; Japanese.

This sequence encodes the protein of the invention. The protein of the invention is a beta-2 adrenalin receptor subtype with Kd value of approximately 75 pM against 125I-cyanopindrol. The protein can be used screening for agonists and antagonists, which are useful in researching asthmatic diseases.

                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                             CC W75777) having an arginine residue at position 16. A novel method CC for identifying individuals susceptible to adverse responses to regular administration of beta-sponists comprises: (a) identifying CC in a genomic nucleic acid sample from the individual first and second alleles of the beta 2-adrenergic receptor gene, and (b) CC classifying an individual as susceptible if first and second CC classifying an individual as susceptible if first and second cC classifying an individual as susceptible if first and second cC identified by any known method e.g. denaturing gel electrophoresis CC or PCR amplification (see also v52615-17). Identification or preferably comprises amplifying a portion of each allele which CC includes the sequence encoding residue 16, and optionally also CC comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known polymorphism in the beta 2-adrenergic receptor gene as being linked CC to adverse responses to regular beta-agonist administration; position 16 of the encoded protein can be either arg or Gly, and CC individuals homozygous for Argl6 are more susceptible.
